

# SEARCHING FOR ALOE VERA?

Sorelle grows on its farms the Aloe Barbadensis Miller, from which it produces Aloe Vera raw materials for the cosmetics, supplements and medicines industries; which are sold in national and international markets. Its professionals have more than 20 years of experience in the cultivation and production of Aloe Vera.

# Perfect Plant

Aloe Vera is a species of succulent plant of the genus Aloe. It grows wild in tropical climates and is grown for agricultural and medicinal uses, as well as for decorative purposes. It is used around the world in many consumer products including food, beverages, liquid supplements, ointments, skin lotions, cosmetics and burns creams. The plant is succulent, similar to a cactus, but is without stem or has a very short stem (up to 25cm long) with an average of 20 leaves in a straight and dense rosette.

Ingredients

Aloe Vera provides a set of substances that include 12 vitamins, 15 enzymes, 19 amino acids, 20 minerals, 75 nutrients and at least 160 active ingredients. And that is exactly what makes it such a special plant: it contains a variety of essential properties that together have a fantastic effect on skin, hair, and nails. Although historically known as 'the beauty plant', the power of Aloe Vera goes far beyond cosmetics, as the whole body can benefit from the healing, keratolytic, regenerative, anesthetic, nutritional, vitamin, detoxifying, coagulants, antibiotics and anti-inflammatory properties of Aloe Vera.

## Whole Process

Headquartered in Bom Retiro (SC) and with farms located in Jaguarari (BA), Sorelle owns all stages of production, from organic plant cultivation to the delivery of concentrates and extracts in the form of liquids and powders, in various specifications. Thus, the company can ensure the quality of the products from the beginning to the end of the process and can meet the different requests of each buyer. Through a careful process of stabilizing the gel extracted from the freshly cut green leaves of the plant, Sorelle obtains pure concentrates and extracts that are highly faithful to the components presented in the most selected plants.

# Combined Experience

Although it was established only a few years ago, Sorelle Indústria E Comércio derives from the purchase of one of the largest Aloe Vera companies in the world, which closed down after three decades in the Brazilian market. More than just history, this ensures the quality of the raw materials that Sorelle delivers. Owners, as well as many of their employees, especially those in strategic positions within the company, have approximately 30 years of work dedicated to cultivating, extracting, processing, stabilizing, and marketing Aloe Vera. So much experience is not readily found out there, especially in this circuit where some try but very few can produce high-quality derivatives from fresh leaves.
